Re: Support Operation Choke Point and other efforts to fight payment fraud; oppose amendments to Justice Department appropriations to curtail payment fraud work

Dear Senator:

Americans for Financial Reform and the undersigned community, consumer, civil rights and labor groups urge you to support efforts to ensure that banks and payment processors comply with longstanding due diligence requirements so that they can avoid facilitating illegal activity by knowing their customers, monitoring return rates, and being alert for suspicious activity. Please oppose any effort to block funding for the Department of Justice's Operation Choke Point or to weaken other regulator efforts to fight payment fraud. We need every tool to fight data breaches, identity theft, scams, frauds, money laundering, and other illegal conduct.

Fraudsters Need Banks and Payment Processors to Access the Payment System

Many scams, frauds and illegal activity could not occur without access to the payment system. Banks and payment processors that originate payments play a critical role in enabling wrongdoers to debit victims' bank accounts and to move money around. Examples of unlawful activity that would not be possible without an originating bank include the following:

- A telemarketing scam defrauded seniors of \$20 million by lying to them to get their bank account information.¹
- A lead generator tricked people who applied for payday loans and used their bank account information to charge them \$35 million for unwanted programs.²
- Bogus debt relief services scammed consumers out of \$8 million and made their debt problems worse.³
- Wachovia Bank enabled \$160 million in fraud by scammers who targeted vulnerable seniors.⁴
- After an enforcement action against Wachovia, scammers moved their business to Zions Bank, which allowed it to continue despite spotting suspicious activity. For example, a

telemarketer calling a senior about a purported update to his health insurance card tricked him into revealing his bank account information.⁵

The FBI estimates that mass-marketing fraud schemes causes tens of billions of dollars of losses each year from millions of individuals and businesses, and one recent study found that fraud drains \$2.9 billion a year from the savings of senior citizens. In addition, the data obtained in breaches like the recent Target, Michael's and P.F. Chang breaches would be useless without a bank to use that data to debit bank or credit cards accounts.

Originating banks are not always aware that they are being used to facilitate illegal activity. But if and when they choose to continue to profit from lines of business in the face of blatant signs of illegality, they become an appropriate target for enforcement action. Indeed, if regulators do not take action against banks or payment processors facilitating illegal payments, they are left playing an impossible game of 'whack a mole' which makes it much too easy for fraudsters to get away with continuing to break the law, and processing institutions to continue to benefit from law-breaking.

Payment Fraud Hurts Everyone

Wrongdoers who access the payment system inflict harm on everyone. In addition to the *direct victims* of fraud, *the general public* spends millions of dollars on identity protection products and loses faith in the security of the payment system. *Retailers and online merchants* lose business if consumers are afraid to shop on their website or at their store. *Consumers' banks* bear the customer friction and the expense of dealing with unauthorized charges. *The fraudsters' banks and payment processors* may suffer regulatory or enforcement actions, lost customers, private lawsuits, and adverse publicity. *American security* is also put at risk when banks and processors that lack know-your-customer controls are used for money laundering for drug cartels, terrorist groups, and other criminals.

DOJ's Operation Choke Point

The Department of Justice's (DOJ) Operation Choke Point is aimed at banks that "choose to process transactions even though they know the transactions are fraudulent, or willfully ignore clear evidence of fraud."⁶ The focus is on fraud and illegality, not activity that DOJ deems immoral.

The first, and to date only, action that DOJ has brought as a result of Operation Choke Point is U.S. v. Four Oaks Fincorp, Inc., Four Oaks Bank & Trust Co. Four Oaks enabled payments for illegal and fraudulent payday loans; an illegal Ponzi scheme that resulted in an SEC enforcement action;⁷ a money laundering operation for illegal internet gambling payments;⁸ and a recidivist prepaid card marketing scam that made unauthorized debits for a bogus credit line.⁹ DOJ charged that the bank ignored blatant red flags of illegality, including extremely high rates of payments returned as unauthorized; efforts to hide merchants' identities; offshore entities clearly

violating U.S. laws; disregard for Bank Secrecy Act obligations by foreign entities; hundreds of consumer complaints of fraud; and federal and state law violations, including warnings by NACHA and state attorneys general.

This type of disregard for know-your-customer requirements and the legality of payments is what led to a \$1.92 billion penalty against HSBC for helping terrorists, Iran, and Mexican drug cartels launder money.¹⁰ It is impossible to read the Four Oaks complaint without concluding that Operation Choke Point is essential work for which DOJ should be applauded, not criticized.¹¹ Calls to abandon Operation Choke Point are misguided and inappropriate.

Banks Must Scrutinize High-Risk Activities, But They Need Not Reject Legal Businesses

Separate from DOJ's Operation Choke Point, bank regulators have asked banks to be aware of higher-risk activities, defined as areas with a "higher incidence of consumer fraud or potentially illegal activities."¹² As with Operation Choke Point, the focus of bank regulators is on areas where fraud or illegal activity is prevalent. For example, telemarketing, credit repair services, and debt forgiveness programs have long been problematic areas plagued with fraud and deceptive conduct. Payday lending is a high-risk activity because it is completely unlawful in 15 states, is unlawful in nearly every other state if the lender lacks a state license, and, especially for online lending, often results in repeated debits that the consumer did not knowingly authorize.

Regulators have also made clear that banks that "properly manage these relationships and risks are neither prohibited nor discouraged" from providing services to lawful customers in high-risk areas.¹³ Banks need only be aware of the potential for illegal activities; know their customers, including basic due diligence of high-risk businesses;¹⁴ monitor payment return rates; and be alert for suspicious activity. These are not new obligations, but they are essential ones.

Some recent headlines have drawn sweeping, unsubstantiated conclusions based on individual bank account closures. Banks close accounts every day for a variety of reasons. The bank that closed the account of the adult entertainer, for example, has stated unequivocally that it was unrelated to either Operation Choke Point or any policy concerning her profession.

Anecdotes about a few banks that have closed the accounts of legal businesses also do not prove regulatory overreach. The bank could have seen signs of illegality; terminated a problematic processor that had both illegal and legal clients; terminated businesses that lacked adequate controls; made its own business decision to cut ties with payday lenders after the bank suffered adverse publicity from its own payday lending; or misunderstood inflammatory headlines and regulatory signals.

Some bank account closures may also be related to Bank Secrecy Act issues that are separate from whether the business is considered a high-risk business. Some payday lenders with state licenses are also check cashers and money transmitters, areas that require compliance with complicated but important rules to prevent money laundering, including the BSA. For a decade or more, long before Operation Choke Point or recent guidances on payment processing, some check cashers and money transmitters have complained about account closures and their difficulty obtaining bank accounts. While those problems may be real and may continue, the fact

that Operation Choke Point is now in the news does not mean that every bank account closure is related.

Regulators are working to clear up any misconceptions created by overreaching headlines or exaggerated lobbyist claims, while also emphasizing the importance of work to prevent payment fraud. As FDIC Vice Chairman Thomas M. Hoenig said recently:

[I]f the bank knows its customer, takes the necessary steps, has the right controls, then they ought to be able to engage with them... But you need to do those things like BSA [compliance].... I do believe we have an obligation to say, “If you are following these rules, [you] have to then judge the risk that [you] are willing to take on.” That’s the process and I’m very comfortable with that.¹⁵

It is irresponsible and dangerous to halt scrutiny of banks and payment processors that close their eyes when they operate in areas with a high risk of illegality. There are thousands of banks in this country and plenty that will continue to handle high risk but lawful accounts. But the tens of billions of dollars that Americans lose to fraud every year and the harms permitted by money laundering are just too great to abandon all vigilance by banks and payment processors that are in a position to stop illegal activity.

Small Banks are Not a Target But May be Disproportionately At Risk

Banks large and small have received subpoenas and enforcement actions related to payment fraud. But small banks may be disproportionately likely to process illegal payments or be harmed by payment fraud. Some fraudsters target small banks that lack the internal controls to spot suspicious activity or that (like Four Oaks Bank) need capital and look the other way in exchange for fee income. High risk activities without due diligence are also more dangerous to the safety and soundness of a small bank.

Moreover, many small banks are on the *receiving* end of payment fraud (when they hold consumer accounts), and those small banks bear inordinate expenses as a result of the lack of due diligence by the originating bank. When a consumer contests an unauthorized payment, the average bank cost for handling a return is \$4.99. But for a small bank the cost is much higher than for a large bank: the average is over \$100 and can be as high as \$509.90.¹⁶

The disproportionate impact of payment fraud on smaller banks is a reason to *continue* efforts to stop illegal activity. It is not a reason to halt such efforts.

Conclusion

Fighting payment fraud should not be controversial. Everyone benefits from efforts to stop illegal activity that relies on the payment system. We urge you to support efforts to ensure that banks and payment processors do their part and to hold them accountable when they fail to comply with know-your-customer requirements, conduct due diligence on high-risk activities, or overlook obvious signs of illegality.
