RE: Support for FY24 LIHWAP funding

Dear Appropriators:

On behalf of the more than 150 undersigned water associations, environmental, low-income, and other public interest advocates, and labor unions, **we urge Congress to provide FY24 funding for the Department of Health and Human Services' Low Income Household Water Assistance Program (LIHWAP)**. Without action to continue this critical program, hundreds of thousands of low-income households could lose access to essential water service.

Today, the cost of basic water service poses a challenge to many low-income households, particularly for those in vulnerable communities. The largest national water rate survey found that between 1996 and 2018, water and sewer charges increased about 2.5 times as fast as inflation;¹ another study concluded that household water and sewer bills more than doubled between 2000 and 2016, while household incomes idled.² And a national poll earlier this year found that 36% of respondents struggle to pay their water bill on time.³ Water bills are expected to continue to rise as communities make billions of dollars in needed water infrastructure investments to protect public health, comply with state and federal water quality standards, and ensure water supply reliability.

These sustained water rate increases will pose significant challenges for low-income households that are already struggling to balance their family budgets. Fortunately, Congress recently acted to incorporate low-income water assistance into the federal safety net by establishing LIHWAP during the COVID-19 pandemic. This was the first time that Congress directly provided funding to address the burden of rising water and sewer bills on low-income households, and over the past two years LIHWAP has been an essential lifeline for millions of people and the water systems that serve them. Through the third quarter of fiscal year 2023, LIHWAP has helped over 1.1 million households nationwide maintain or restore water service.⁴ Nationwide, at least 13,000 water and wastewater systems have participated in the program to date.⁵

However, in its current form, LIHWAP was established as a temporary program and its initial \$1.1 billion appropriation expired at the end of the 2023 fiscal year. As a result, low-income households across the country are now left without access to federal water bill assistance, putting a strain on family budgets and putting hundreds of thousands of people at risk of losing their water service.

We know that the need for low-income household water assistance is not temporary and is just as important to public health and economic development as other vital needs such as home energy and nutrition. The federal government has offered low-income assistance for these other priorities for decades, so we urge you to acknowledge the equal importance of access to water and continue funding for LIHWAP in FY24. Recent national polling found 70% support for continuing Congressional assistance to help pay water bills.⁶

We believe that federal, state, tribal, and local levels of government must work together to ensure that all households are able to pay their water bills without burdening financially vulnerable families. LIHWAP has brought these various levels of government together to achieve this goal, so we simply cannot afford to backtrack on the progress we have made. This is why so many of the nation's water associations, environmental organizations, low-income and other public interest advocates, and unions jointly request your strong support for continued LIHWAP funding in the 2024 fiscal year, as an interim step on the path to authorizing and funding a permanent low-income water assistance program.

Thank you for your attention to this important issue, and we look forward to working with you to ensure everyone across the country can access clean and safe water for the benefit of public health.

Sincerely,

National Organizations
